

LONGABERGER BASKETS® METAL COMPONENTS

FEATURES

- Tacks, tags, rivets, tack covers and snaps are made of solid cast or formed metals.
- Some are finished with electronic finishes (brushed nickel) or natural minerals (copper).

BENEFITS

- Metal components allow for more personalization, interest and fun.
- Metal components are selected based on durability, performance and reaction to stain.

CARE

- Gently clean with mild soap and water.
- Dry with a clean cloth.
- For stain build-up on copper rivets, a high grade of sandpaper (200 grit or higher) is recommended when mild soap and water is ineffective. Sanding is not recommended on other metal rivets.

GOOD THINGS TO KNOW

- Metals will vary in color and appearance due to tooling and sourcing.
- Tack heads react to tannins in hardwoods, causing a darkness on the wood around the head.
