

LONGABERGER BASKET[®] PROTECTORS

Longaberger offers two kinds of protectors:
Thermoformed protectors and Injection Molded protectors.

FEATURES:

Thermoformed

- Protectors are made of a clear plastic material with a weave pattern on the outside.
- Single, Divided or Stackable protectors are available using thermoformed plastics.

Injection Molded

- Designed primarily for food or organization uses, injection molded protectors are made from a different type of plastic than thermoformed, and is thicker to ensure quality and safe use in the dishwasher.
- Styles include Single, Divided and Lidded.

BENEFITS:

Thermoformed

- Protectors protect and help organize the interior of your basket.
- They are clear so that the fabric liner can be seen.
- The weave pattern makes these protectors distinctly Longaberger.

Injection Molded

- Provide alternative uses not possible with thermoformed. The Lidded Protectors are examples of these design innovations.

CARE:

Thermoformed

- Hand wash with warm water and dry.
- To maintain their shape, avoid leaving protectors in a car or other exposed location for prolonged periods; excessive heat or cold may affect performance.

Injection Molded

- These protectors are more rigid than thermoformed protectors; avoid dropping on hard surfaces.

GOOD THINGS TO KNOW:

Thermoformed

- Designed to allow enough space for a liner to fit.
- Made with food-grade safe recyclable materials and are recyclable themselves.

Injection Molded

- The Divided Lidded protectors are designed to fit in the basket with the lid on. When the lid is removed, there is gap around the basket.
- Check the bottom of each protector for care.
- Made with food-grade safe recyclable materials and are recyclable themselves.
